ARTISTIC PHOTOGRAPHY

SPECIAL TERMS FOR NURSES.

Have you a good photograph to be produced when occasion arises?

If not, pay a visit to STUART, Photographic Studios, 47 and 49, Brompton Road, S.W.3, and you will not be disappointed in the result.

Diphtheria

Every nurse knows the deadly nature of diphtheria germs. To combat them effectively, the sick room should be constantly sprayed with Sanitas.

Sanitas possesses peroxide and aromatic constituents, which make it especially valuable as a disinfectant and deodorant. Guard against infecting yourself, by using Sanitas also as a gargle.

Sample gratis to any certified nurse.

Is Talc best for Baby?

Yes—talc is recognised now as the one safe base for a baby powder. It possesses a smooth *lubricating* quality which protects the tenderest skin from the effects of chafing and moisture.

But there are two kinds of talc. One crystalline, with sharp edges—ordinary talc. The other of superfine texture, with smooth edges—*flaky* talc.

We use *flaky* talc as the basis of Johnson's Baby Powder because it is finer and softer than ordinary talc. Rub a little between your thumb and finger—you will feel a real difference, and remember—the difference *you* feel will be felt much more by baby! Always use

Johnson's BABY POWDER
