

# Neutral, Soluble Aspirin

## An old problem; a new solution

The disadvantages in the administration of aspirin ("the safest and most widely useful of anodyne drugs"), derive from the fact that it is acidic and of low solubility.

All the therapeutic advantages of aspirin, however,

and none of the disadvantages, may be found in 'Disprin,' a stable preparation in tablet form which dissolves rapidly in water to produce a neutral and palatable solution of pure calcium aspirin.

The therapeutic advantages of calcium aspirin over aspirin itself have long been known to the medical profession. This neutral salt produces the same pharmacological effects as aspirin but, owing to its high solubility, with greater speed. It is the more sedative preparation; and being neutral and soluble, it is non-irritant to the gastric mucosa.

Unfortunately, however, calcium aspirin is an unstable compound, liable both in manufacture and in storage to contamination by such nauseous breakdown products as acetic and salicylic acids.

The problem of prescribing calcium aspirin, free from decomposition products, is solved in Disprin. This stable preparation in tablet form combines the convenience of aspirin with the therapeutic advantages peculiar to pure calcium aspirin. Its analgesic, sedative and anti-rheumatic properties and the fact that even in large amounts it does not produce gastric disturbances have been confirmed over a long period in clinical trials carried out at many leading hospitals.

### DISPRIN<sup>REGD</sup>

*Neutral, stable, soluble, palatable calcium aspirin*

Bottle of 26 tablets, price 2/- including Purchase Tax . On prescription Disprin is free of Purchase Tax . Clinical sample and literature supplied on application.
