

"THE GREAT QUESTION OF HEALTH."

"There are many who, without incurring the charge of being valetudinarians, are anxious to understand the best means of keeping their bodies sound. We may recommend to the notice of such the monthly magazine 'THE HEALTH MESSENGER.' This admirable periodical is full of important truths and suggestions regarding matters of health. It deals in its columns with all the latest theories and discoveries; and as important features it has also specially and ably written articles by eminent experts. We do not hesitate to think that the magazine supplies a want, and that it will be welcomed."—*Newcastle Chronicle*.
