

The blue signature, J. V. Liebig, is printed across the wrapper of every jar, which also bears the manufacturer's initials, "Lemco."

*Peptarnis*.—This preparation, shown by the same firm, is an ideal peptone of beef, palatable, digestive and highly nourishing. It is manufactured from especially selected cattle, by a unique process, which does away with the objectionable flavour so often noticeable in peptonized foods. It is a wonderfully quick restorative after illness, and is specially valuable in cases of dyspepsia, or where the digestive system is weakened or out of order.

Matrons and trained nurses should bear both these preparations in mind.

MESSRS. PATE, BURKE & CO., 6, Wool Exchange, Basinghall Street, London, E.C., Paris and Rheims., exhibited *Petanelle* specialities, consisting of surgical dressings, pads, blankets, bedding, etc. *Petanelle* is a peat fibre with a mixture of wool or silk, and possesses powerful absorbent qualities of high value in all diseases where there is a profuse and malodorous discharge.

FAIRCHILD BROTHERS & FOSTER, Snow Hill Buildings, London, E.C., handsomely exhibited their well-known preparations *Zymine* Peptonising Tubes, *Peptogenic* Milk Powder, *Panopepton* and *Pepsencia*. They made a special display of *Pepule* products. This is a new name they are applying to their compressed digestives, which heretofore have been issued under the Tabloid brand. There are a series of four preparations issued under the new trade mark brand, namely, *Pepule* Pepsin 1-grain, *Pepule* Pepsin 3-grain, *Pepule* Zymine 3-grain, and *Pepule* Zymine Compound.

These preparations are put up in compressed form, delicately coated with pure sugar; indeed, in everything but name they are exactly as they were when issued as Tabloid Pepsin and Tabloid Zymine.

SCOTT & BROWNE, Ltd., 95—98, Great Saffron Hill, E.C.—Conspicuous among the various stalls was the one occupied by *Scott's Emulsion*. This valued product is always so much in evidence that comment is unnecessary, beyond the importance attached to glycerine as combined with cod-liver oil and hypophosphites in the emulsion.

The value of glycerine in preventing fermentation is unquestionable. As a vehicle for the introduction of cod-liver oil into the system, glycerine is most pronounced. Moreover, the manipulation and the proportion of its ingredients makes *Scott's Emulsion* a most reliable emulsion

of cod-liver oil. It keeps in a perfect state of preservation in all climates for an indefinite time.

RONUK, Ltd., 35, Providence Place, Brighton.—The distinctive feature in connection with this firm's *Ronuk* (a sanitary polisher and cleanser for floors, etc.) was that, in addition to the Hospital *Ronuk*, now used extensively in the leading Hospitals, a special stain was exhibited for staining and giving a body to deal boards. Much interest was manifested in *Ronuk*, and we heartily commend the preparation to the notice of stewards and Matrons of Hospitals, Asylums, Workhouses, etc.

PARKE, DAVIS & CO., 111, Queen Victoria Street, London, E.C.—The rapid strides this firm has lately been making was clearly shown by their display of exhibits, the most interesting to trained nurses, which we noticed, being their *Glycerin Suppositories*, supplied in bottles containing  $\frac{1}{2}$  dozen and 1 dozen. They contain 95 per cent. of pure Anhydrous Glycerin, and form an eligible method of relieving constipation without disturbing the stomach; their *Egg Emulsion of Cod-Liver Oil*, containing 40 per cent. by volume of selected Norwegian Oil, emulsified solely with fresh eggs, and flavoured with fine old brandy. It may be recommended as nutrient and palatable, as well as their well-known *Euthymol* preparations.

AYLESBURY DAIRY COMPANY, Ltd., St. Petersburg Place, Bayswater, London, W.—This firm ranks foremost in preparations of milk for infants and invalids. So much confidence has always been displayed in them by members of the Nursing Profession, that it is only necessary for us to summarise the various preparations shown, as follows:—

*Humanized Milk*.—No. 1. Prepared with a minimum per centage of curd (casein). For infants of very delicate constitution.

No. 2. Prepared with a full percentage of albuminoids.

*Peptonized Milk*, for invalids and sufferers from dyspepsia.

*Specially Prepared Whey*, for anæmia.

*Sterilized Milk and Cream*, for children and delicate persons.

*Cream Milk for Infants*.

*Modified Milk for Infants*.

*Milk Sugar*.

*Muffler's Sterilized Food for Infants and Invalids*; and

*Koumiss*, for rapidly promoting the appetite and nutrition, when no kind of food, cod-liver oil, or even milk, or medicines, can be retained by the stomach.

(To be continued.)
