NATIONAL ASSOCIATION FOR THE PREVENTION \mathbf{or} INFANT MOR-TALITY AND FOR THE WELFARE OF INFANCY.

A Course of Advanced Lectures on Infant Care organised by the above Association will be held at the College of Ambulance, 3, Vere Street, W., on Mondays from March 12th to June 18th, at 5.30. Tickets for the Course, 5s., or single Lectures, 1s., must be obtained in advance from Miss Halford, 4, Tavistock Square, W.C. A Supplementary Tutorial Course of six lectures begins on March 28th, limited to 50 students. Fee for the Course, 6s.

CENTRAL MIDWIVES BOARD FOR SCOTLAND.

At the recent meeting of the Central Midwives Board for Scotland Sir J. Halliday Croom and Dr. James Haig Ferguson were re-elected chairman and deputy chairman respectively. Penal cases, financial, and examination committees were appointed. A very satisfactory statement was submitted, showing that up to December 31st, 1916, over 1,500 enrolments had been effected. It was reported that since the close of the accounts the numbers enrolled now exceeded 1,800. Arrangements had been made with the English Board for reciprocal recognition as regards curriculum for examination. There were finally adjusted and approved lists of institutions under which midwives may be trained under the rules of the Board, and others, which we shall publish next week.

DIET POINT.

Lentils, because of the lime they contain, are an invaluable food for expectant mothers, and are also cheap. Many, however, dislike lentil soup, and are unaware that ground lentils can be made into excellent suet pudding, by using two-thirds of lentil flour to one of Government flour, adding baking powder to make it light. Such a pudding forms a delicious and neurishing meal if served with gravy in which vegetables have been boiled.

A TEN MONTHS' BABY.

A ten months and four days baby was born in October of last year in California, U.S.A. For six weeks before the child was born the mother had labour pains regularly every day, from 4 to 8 a.m. Her medical attendant then decided on an operation, but consented to a consultation. This resulted in a further delay of two days, the pains having ceased. Examination proved the child to be alive. After 36 hours' cessation the pains recommenced, and fifteen minutes later the child was born. It weighed 9½ lbs.

MIDWIVES FOR CANADA.

In our issue of January 6th, we published a letter from Miss Ard Mackenzie, Chief Lady Superintendent of the Victorian Order of Nurses in Canada, commenting on the report of a meeting convened by the Colonial Nursing Association with the object of sending out midwives to Canada, published in our issue of November 11th.

The advice of the Chief Superintendent of the Victorian Order of Nurses in Canada who is acquainted with nursing conditions throughout the Dominion, should receive the attention it merits. Lady Pigott, Chairman of the Canada Committee of the above Association, however discusses this article in another paper and describes this expert opinion as a "regrettable effusion "and an" unwarranted attack on the efforts to ameliorate conditions and save child-life in the Dominion." We shall discuss Lady Pigott's article fully in our next issue.
