26th. Discharged in England.

...treatment for half an hour to attain this. Such a pro-
tracted treatment militates greatly against the method
it is proposed that the concentration of the antiseptic
actually present at a given time is insufficient to, as a
property. The use of a concentrated solution seems
undesirable because it would be difficult to prove its
effectiveness in the case of carriers of organisms without
the employment of a special method and requires a
series of experiments was made.

Chloramine-T, while freely soluble in water, is prac-
tically insoluble in oils. But the corresponding dichloro-
amine (toluene-p-sulphodichloramine, $C_6H_4SO_2NCl_2$), to
which we now propose to assign the abbreviated name of
dichloramine-T, though very sparingly soluble in paraffin
oil, is quite readily dissolved in eucalyptol. The resulting
solution can be subsequently diluted with paraffin. In
this way a reasonably bland oil solution, containing as
much as 2 per cent. of the dichloramine, can be obtained. It
is with such solutions of different strengths that our second
series of experiments was made.

...to issue of the *Edinburgh Medical Journal* is
even up to the medical and surgical aspects
and forms the second collective report
published by the contemporary. Dr. Chas.
with infectious diseases, Dr. Norman Walker
Gleason with dermatology, Mr. J. V.
and Dr. H. M. Macquair with diseases of the eye,
Fraser with diseases of the ear, nose, and throat;
H. G. Ross, who is an able exponent of the views
Wallace, with the prevention of dental disease.
These subjects is treated from the immediate
view of public welfare. Dr. J. Hally Meikle con-
tributes to the medical inspection and supervision
of the public.

Keeping abreast with Medical Research

THE influence which medical research has on medical practice is more directly
effective when accompanied by the immediate manufacture in marketable
quantities of new compounds which are discovered. Of interest to the pro-
fession, no doubt, is the fact that Boots Pure Drug Co. Limited, are manufacturing
synthetic and natural organic drugs of unsurpassed purity and excellence. They can
supply immediately to the medical profession all the new antiseptics used by Dakin
and his colleagues in their researches, which are described in various issues of the
B.M.J. The attention of medical men is directed to

Oil solution of Dichloramine-T

(toluene-p-sulphodichloramine)

FOR USE IN SURGERY AND NASAL ANTISEPSIS.

A complete outfit, containing the necessary drug, prepared oils, and atomiser, suitable for the
treatment described and recommended by Dunham & Dakin in the *B.M.J.* of June 30th, 1917,
page 865, for the disinfection of the naso-pharynx of carriers, is supplied by Boots Pure
Drug Co. Limited. Supplies of Dichloramine-T are also available for prescription service
on application through any of the 580 branches of Boots *The Chemists*.

Price of complete Outfit, 7/6 post free; or without Atomiser, 5/-
