STANDARD MALT EXTRACT

Plain and with Cod Liver Oil.

THE attention of the Nursing profession is specially invited to these preparations, which are now growing more and more in favour amongst medical men both in London and the provinces. They are extensively used by the leading Chest and other Hospitals. A trial will at once prove that they are far more powerful in results than any other known Malt Extract preparations, as the **Standard Malt Extract** contains many times more **Diastase**—diastase being acknowledged by all competent authorities to be the most important constituent of Malt Extract. This Extract also contains "Maltose," which is rich in flesh-forming and bone-producing properties; and the soluble phosphates of lime, soda, and potash, naturally present in the grain, serve as a valuable tonic to the nervous system. A Sample will be sent to any Nurse or Doctor on receipt of a post-card, and special prices quoted.

The **STANDARD MALT EXTRACT Co., 23, Billiter Street, London, E.C.**
