

CONDENSED MILKS have long since been acknowledged by the medical faculty as a valuable addition to infantile dietary, and in consequence are frequently prescribed in preference to the ordinary milk on account of being far more digestible for delicate children. It is not possible for every child to be brought up on its natural food, therefore it is necessary for the mother to provide a substitute; but this needs a careful selection. Invariably the uncondensed milk from the cow will be found far too rich in substance, and even if diluted with water and sugar it is not all that can be desired; besides

which, during the summer months it is constantly undergoing changes, though at first the degrees of sourness are imperceptible, so that even with the greatest care it is impossible to keep it fresh. Yet, on the other hand, the majority of the condensed milks are too sweet, which is equally injurious in its way, so that an insurmountable difficulty would arise were it not for a few of the manufacturers—prominently among which stand the "Anglo-Swiss Condensed

Milk Company," 10, Mark Lane, E.C., with their valuable "Milkmaid" brand, which is both nourishing and delicious. We cannot speak too highly of any of the preparations prepared by this firm, as their chocolate, cocoa, and coffee (all prepared with milk) will show if tried; and those of our readers who are not already *au fait* with these luxuries would do well to test the quality at once.

HARD SILVER PLATING BY THE ARCAS PROCESS.—One of the most useful and most widely-appreciated of the properties of electricity is that by which the baser metals may be coated with the more precious, and thereby, as far as usefulness is concerned, may, in some respects, almost equal the latter in value. The invention made a revolution in metal work, for although the art of silver-plating existed before the art of electro-deposition was understood, the process was costly, difficult, and very limited in its applicability, only articles of the plainest design being capable of its treatment. Electro-plating with silver held the day for a long while, and may still be said to hold it, but has found a strong rival in nickel-plating, which has the advantage of being cheaper, while its appearance is almost equally effective. Both the silver and nickel processes

CYCLING
FOR THE
MAIMED.

80 Miles a day
WEARING AN
ARTIFICIAL LEG.

The ARTIFICIAL ARMS, with HANDS and LEGS, with side, as well as backward and forward ankle movements, made *only* by

J. & E. FERRIS,
OF
48, Great Russell St.,
LONDON, W.C.,

Are acknowledged by WEARERS & the MEDICAL PROFESSION to be the **Best** the **Safest**, and the most **Durable** Limbs in

The WORLD.

They are the *only* Artificial Limbs with which the health-giving pleasure of **CYCLING** can be enjoyed.

Illustrated Pamphlets, with numerous testimonials and opinions of the Press, confirmatory of the above, forwarded Free on application.

Apply as above

A CONCENTRATED
— **RAW FOOD.**

Most Nourishing and Strengthening.
Indispensable for Invalids and Sick Room.

The *Lancet*, October, 1891, says: "Our analysis and examination of this admirable preparation show the extraordinary degree of concentration that has been attained by a process which can only be regarded as phenomenal, since the retention of the beef-juices in the raw and un-cooked state has also been secured. The total solid matter amounted to 22.22 per cent. of which 1.25 was mineral constituent (phosphate), 16.90 albuminous matter (2.68 nitrogen), and 4.07 other organic principles. Despite the excellent condition of the sample submitted to us, no objectionable preservatives could be found."

Of all Chemists, &c., in 2oz., 6oz., and 12oz. bottles, price 1s. 3d.; 3s.; and 5s. respectively.
